13 there is created a duplication in numbering, reads as follows:

16 medicine, drug or any other substance or device intentionally to  
17 terminate the pregnancy of a female known to be pregnant with an  
18 intention other than to increase the probability of a live birth, to  
19 preserve the life or health of the child after live birth, to remove  
20 an ectopic pregnancy or to remove a dead unborn child who died as

3 unborn child. This includes the off-label use of drugs known to  
4 have abortion-inducing properties, which are prescribed specifically  
5 with the intent of causing an abortion, such as mifepristone  
6 (Mifeprex), misoprostol (Cytotec) and methotrexate. This definition  
7 does not apply to drugs that may be known to cause an abortion, but  
8 which are prescribed for other medical indications, such as

24 perforation, infection, heavy or uncontrolled bleeding, hemorrhage,

1 blood clots resulting in pulmonary embolism or deep vein thrombosis,  
2 failure to actually terminate the pregnancy, incomplete abortion

4 ectopic pregnancy, cardiac arrest, respiratory arrest, renal  
5 failure, metabolic disorder, shock, embolism, coma, placenta previa  
6 in subsequent pregnancies, preterm delivery in subsequent  
7 pregnancies, free fluid in the abdomen, hemolytic reaction due to  
8 the administration of ABO-incompatible blood or blood products,  
9 adverse reactions to anesthesia and other drugs, subsequent

13 Administration criteria provided in the Medwatch Reporting System;

8 state who has the ability to:

- 9 a. identify and document a viable intrauterine pregnancy,
- 10 b. assess the gestational age of pregnancy and to inform  
11 the patient of gestational age-specific risks,
- 12 c. diagnose ectopic pregnancy,
- 13 d. determine blood type and administer RhoGAM if a woman
